# Sasai App

Sasai is a multi-service platform that brings together digital payment solutions (e-wallet, cross-border money transfers), on-demand services (airtime, WiFi bundles), instant messaging (chats, voice & video calls), and digital media services (posts in timeline, videos, podcasts, video streaming) in a single, easy-to-use mobile application.

Such nature of multi-service allows users to experience online payment, virtual social life, online digital content community easily, building a vigorous Sasai ecosystem that leads to so much more.

Sasai Chat

Sasai Chat helps users to send messages and express emotions easily and quickly through tailored emojis, images, videos, voice and greeting cards. It builds highly socialised connections to boost users' stickiness.

❖ High reliability. The stable platform ensures no lost or duplicated messages.
❖ Powerful concurrent support. Over 1,000,000 users can chat online at the same time.
❖ Low latency. Each message is delivered in less than 2 seconds.
❖ Extensive encryption support. P2P encrypted message is supported.
❖ High scalability. More services are easily migrated into the platform.

Voice/Video Calls

Voice/Video Calls communicate and socialise users in real time without limitations to space.

Especially in the post-epidemic era, Voice/Video Calls play a significant role in addressing the immediate communicational and expressive need for b broad users.

❖ High reliability. The call success ratio is over 98%.
❖ Powerful concurrent support. 1,000 calls can happen at the same time.
❖ Low latency. The voice/video's latency is less than 600 milliseconds.
❖ Multiple participants. Up to 50 users can join the same voice call and 20 for video call at the same time.
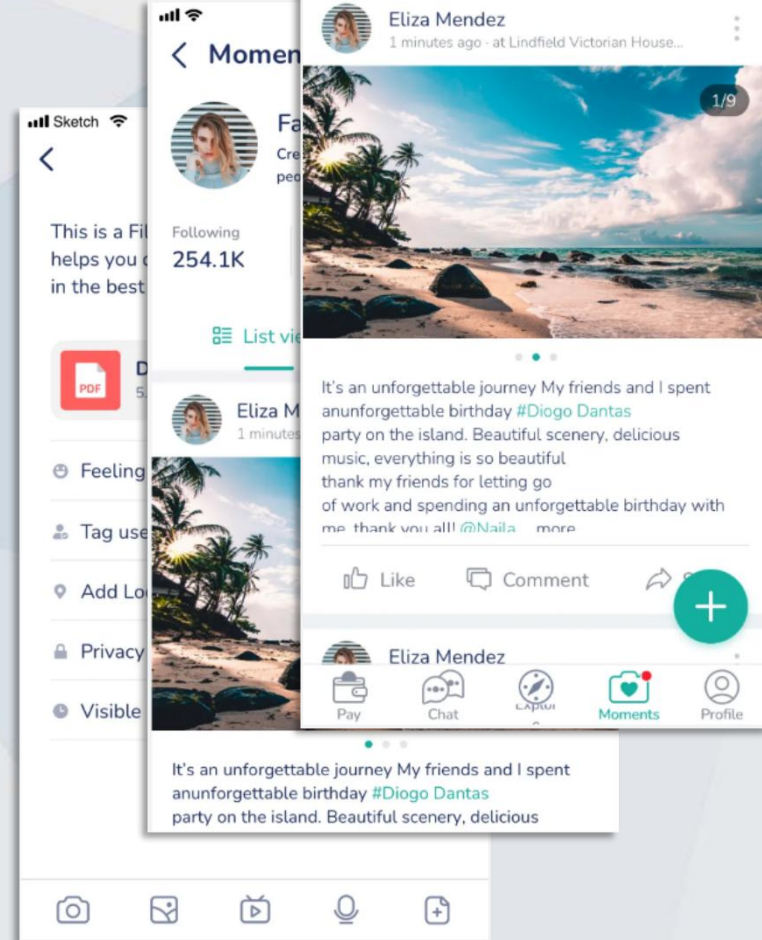

Digital content—Moment

Moment breeds a social community via Moment Timeline, which enables users to post with text, pictures or videos any time and any where. Users can share their daily life and emotions, interacting with friends in comments and likes.

Moment allows users or organisations to apply an public account, which are devoted to publicising and promoting their product or culture. The Moment public account is also available on both app and the web portal.

❖ Advertising promotion supported.
❖ Content filtering supported.

Digital content—Watch

Watch is the sea of countless localised African videos with both PGC and UGC for your subscription. In Watch, operational specialists can manage their official videos and community content through the operation portal.
Creating their own albums and videos, watch users can express their ideas and show their talents, as well as to attract fans and build their influence and IP through producing quality video content.

❖ Configurable watch videos for recommendation.
❖ AI-based Content filtering both automatically and manually.

Digital content — Podcast

Podcast extends the user scenarios via quality audio content. Podcast users listen to their interested audio while doing housework, walking, taking buses, driving cars, etc.

Podcast users can create their own albums and radios to show their ideas and talents, as well as to attract fans and build their personal IP through quality audio content.

❖ Rich free audio album resources.
❖ Low latency based on CDN service.

Digital content — Live Stream

Live Stream meets users' updated social needs for live entertainment while text, pictures, traditional audios and videos are just not enough. Realtime Video Live stream has become a popular trend, influenced by the pandemic and offline social distance.

Live stream users can conduct efficient and real-time communication, learning, interaction through Video Live Stream and breaking the limitations of space and time. Live Stream fans can also donate money to their favorite anchors and content creators.

- ❖ Low latency under 4G/WiFi Network.
- ❖ Web live streaming is supported.
- ❖ Multi-broadcasting integration with OBS.
- ❖ More potentials and extensions with co-hosting and virtual hosting, etc.
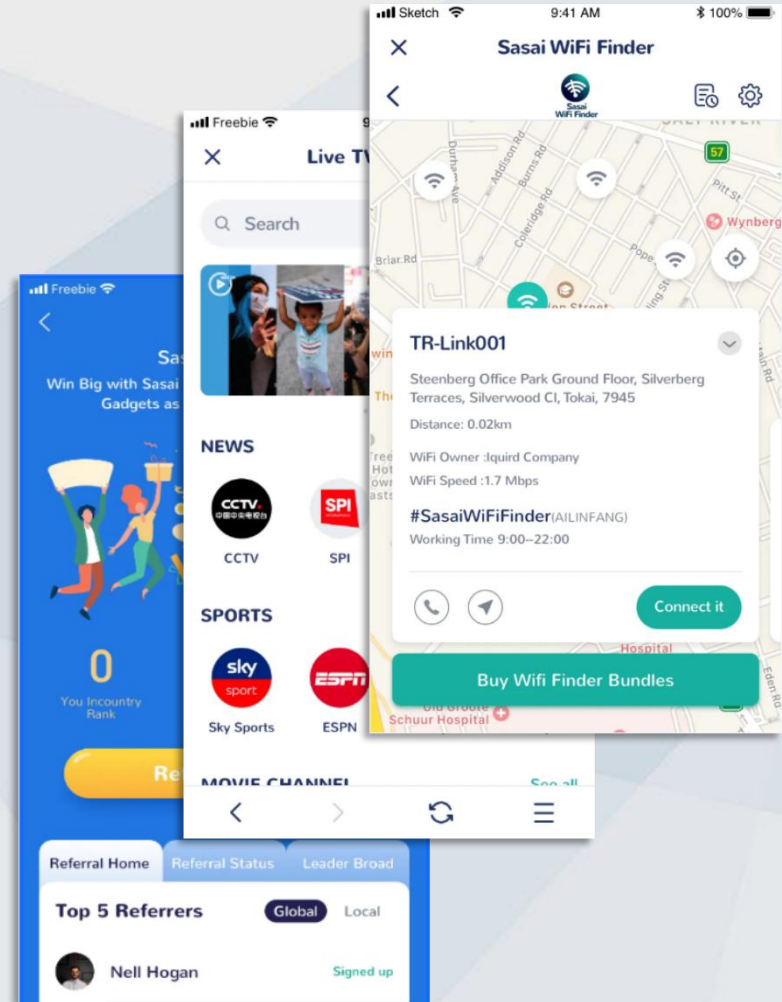

Sasai Explore

Sasai Explore grants users a wide range of pleasant products and services. Explore includes yet not limited to extensive services, such as purchasing WiFi bundles through WiFi-Finder, referring friends to sign up for rewards, watching mainstream TV channels.

The best is yet to come. Sasai Explore aims to introduce more exciting products and services in the future.
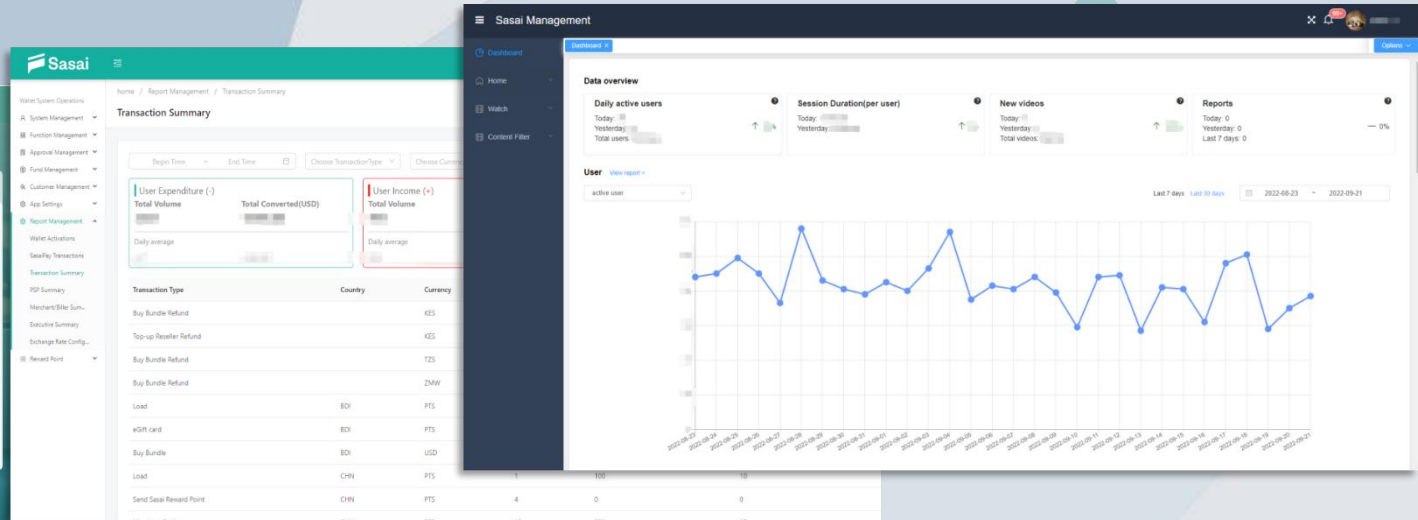

Operational Portals

Operational specialist and internal staff monitor users behaviours, edit digital contents, review data-based reports through the configurable portals.
